

DAT-MAIL CSV EXPORT EXTRA FIELDS

This document provides a list of the extended data or “extra fields” provided by DAT-MAIL’s CSV Export “Postage Audit (by piece with extended data)”. The extra fields in the export are taken from the Mail.dat file set.

THINGS TO KNOW

1. The Job ID reported in the export file will either reflect the Job ID or the Historical Header Job ID, depending on how the option is set in the ‘Export’ tab of DAT-MAIL’s Setup screen (i.e. ‘File’ > ‘Program Settings’ > ‘Program Setup’).

2. Fields are based on the relationship the other records have with PBC or PDR. All supported fields will be populated and there will be no configurability as to which fields should be included or their order. Fields are ordered by Mail.dat file.
3. A header row is added to the CSV that indicates the content of each field to accommodate mapping imports into to other applications. The first data element in the header file will include a file version number so that if this layout changes in the future, 3rd party applications can properly parse the file.
4. In the event there are many values for a Mail.dat field possible for a single mail piece, the export format includes multiple columns to accommodate a reasonable number of values. The CSV file layout is static and will not change based on how many values there are to represent. An example of this may be SFR where a mail piece could be associated with multiple extra services. Though Window Book is not aware of a current situation where more than 3 extra services could apply to a single piece, 5 sets of SFR fields are provided in the CSV.

5. Knowing that logical Mail.dat files and siblings present very special challenges, Window Book produces a separate JSON file with the same root file name as the CSV that includes the container ID of any CSM record linked to siblings followed by the sibling barcodes linked to them.
6. Some Mail.dat fields are from Mail.dat files Window Book does not support or are not directly or even indirectly linked to PDR/PBC. These fields are omitted from the export. This includes the transportation records added to Mail.dat in 2018-1, RMD and RMS.

LIST OF SUPPORTED/INCLUDED FIELDS

File	Field Name	Field Code	Notes
	IM Barcode	PDR-1122 or PBC-1122	
	Postage		Calculated Postage
