

Easily meet new USPS® regulations with Window Book's customized interfaces

About Custom Programming

At Window Book, we realize that not every data processing environment can have new software solutions "plugged in" and keep the operation running smoothly.

Window Book's Custom Programming offering is designed to help you automate and streamline your existing mail production processes by providing customized interfaces between your systems and our industry-leading Post-Presort software solutions.

Who can benefit from Custom Programming?

Everyone!

- Lettershops
- Corporate Mailers
- Manifest Mailers
- Service Bureaus
- Mail Owners

What are the benefits?

- Quicker, more efficient production and processing of correct Postage Statements
- Streamline internal mailing processes
- Automate processes that currently require too much manual labor
- More accurate accounting of postage costs for client billing and internal auditing
- Interface with data report files from Carter Control Systems (CCS) TMS system: automatically update the merged Mail.dat files with the tray and pallet assignments and processing points

How does it work?

Our experts will design, develop and implement a system for mail preparation, documentation, and reporting to meet your specific needs while enabling you to comply with USPS regulations and Intelligent Mail® Full-Service requirements.

Some of the Custom Programming offerings include:

- Interface to *PostalOne!*® Transportation Management Systems (i.e. Carter Control System's AMPS™ with IMSA) to update the original presort data, perform co-palletization, and produce accurate mailing documentation
- Enhanced mail sortation, manifests, postage statements, container labels, and internal management reports to meet USPS and Intelligent Mail Full-Service requirements
- Automated Mail.dat file upload and mailing confirmation utilities
- Automated data feeds of Postage Statement data into the customer's accounting systems
- Automated process to split Mail.dat files
- Automatically merge Mail.dat files from multiple jobs to facilitate co-palletization
- Automated export of "planned" and final merged Mail.dat files for batch upload into *PostalOne!*

Your Challenges & DAT-MAIL™ Solutions

How can I automatically update and produce accurate Postage Statements that reflect the final assembly of trays and pallets?

DAT-MAIL lets you integrate with *PostalOne!* Transportation Management Systems (TMS) (i.e. Carter Control System's AMPS™ with IMSA) to update the original presort data, perform co-palletization, and produce accurate mailing documentation:

1. Import the data from the TMS system, which has all of the "nesting" information (what trays are on what pallets along with their destinations)
2. Update the Mail.dat data
3. Perform co-palletization for trays from multiple Mail.dat files
4. Generate the final mailing documents to be transmitted to *PostalOne!*

Our software will not allow us to co-palletize. How can we combine multiple 8125 forms to reflect the actual palletization process we perform?

DAT-MAIL's Palletization Module will let you produce accurate pallet counts on your Postage Statements and produce accurate 8125s:

- Create and manage Intelligent Mail Container Labels & barcoded "skid sheets" for every pallet you produce, including "courtesy pallets"
- Build "courtesy pallets" from the non-palletized trays/sacks left over from your presort
- Co-palletize sacks and trays in Standard Mail
- Co-palletize by merging multiple Mail.dat files from different mailings
- Automatically fill in accurate pallet counts on Postage Statements without editing the Statement

Do you have these problems?

- How can we adjust postage statements for spoilage and/or shortage?
- Is it possible to automatically separate the automation-compatible and non-automation mailpieces in the Mail.dat files?
- Can we automatically process multiple Mail.dat files from multiple jobs?
- We need a quicker and more efficient way of splitting Mail.dat files when necessary
- We need to enhance our current mail sortation systems to meet USPS regulations, including Intelligent Mail Full-Service requirements

Call us [800-524-0380](tel:800-524-0380) or email postalspecialist@windowbook.com and let Window Book's Custom Programming Service help you!
