

April 28, 2020 and May 8, 2020

Take advantage of this in-depth view of What's New in Window Book's latest software release.

"Enhancements" only are detailed in this document. "Bug Fix" information can be found in the Technical Release Notes provided on each product's Software Download web page.

Dozens of projects are underway to add new functionality and improve user experience -- most of which are based on <u>your</u> suggestions!

~ Want to review a past "What's New" document for an older software release? ~

Go to <u>https://www.windowbook.com/Support/Downloads</u> and select the product you want information for.

On the product's Downloads page, scroll down and click the "All Release Notes" button.

Click on the version or release you want information for to expand/view the Release Notes for it.

ATTENTION

AWAM File Manager & Automation Scheduler Updates

Changes to the April 28th publication of this document that are recorded in this May 8th version pertain to the AWAM File Manager and Automation Scheduler software applications.

Modifications were made to resolve an issue that was discovered in the AWAM File Manager (version 8.20.13.28) that needed immediate attention. The resolution is available in the newly released version (8.20.13.29). To support these changes, an update to the Automation Scheduler is also required. Version 8.20.3.149 has been updated to 8.20.3.150. For more information, refer to each product's Release Notes.

1

Both products must be installed to resolve the AWAM File Manager issue!

Certain Product Installers Have Changed

With the March release of Window Book's Automation Scheduler and DAT-MAIL software, we introduced the option to update your PostalWeb Connector and PostalWeb Desktop Dashboard software (respectfully) at the same time, to make the updating process easier and faster.

These new installation options require a specific installation update sequence; as well as, some other details that are required to be able to successfully run your Window Book products.

So, if you haven't yet updated to the March release of the Automation Scheduler and DAT-MAIL, we strongly recommend you review the <u>March publication of "What's New?"</u> before attempting to update to this April release. Updating to the March release before updating to this April release, is <u>not</u> necessary; however, the March publication of "What's New?" contains important information and instructions that you need to be aware of when you update these two products any time beyond the March release.

Also recommended is a review of the <u>Automation Scheduler enhancement</u> documented in this April version of What's New/

DAT-MAIL[™] DAT-MAIL version 21.20.13.20

Multi-Carrier Trailer Manifesting now includes support for King Logistics users!
 MCTM isn't just for use with LSC or ALG anymore. <u>Click here</u> to get the important details!

Now you can update a pallet's gross weight in Multi-Carrier Trailer Manifesting!

An **Update Gross Weight** button has been added to the Browse Pallet Database screen. <u>Click here</u> to check it out!

✓ DAT-MAIL Editor users can now view their pallet list!

Viewing your pallet list used to be restricted to Multi-Carrier Trailer Manifesting users only, but with this release of DAT-MAIL all that has changed. <u>Click here</u> to discover how we've made it possible for our Editor users to take advantage of having such valuable information right at their fingertips!

Troubleshooting in wbSCAN just got easier for LSC/DIME users.

When using LSC/DIME, certain functions in wbSCAN generate calls that communicate with other programs via request/response files. Having access to and being able to view these files can be critical should troubleshooting be necessary. In this release of DAT-MAIL/wbSCAN, we've made doing this super easy. <u>Click here</u> to see how!

wbSCAN's Dashboard now provides drill-down capabilities so you can see the pallet information for each job!

<u>Click here</u> to see how we've made the Dashboard an even better way to monitor the production and shipping status of all your jobs!

✓ We made running our Undocumented Piece Audit Report smarter.

The Informed Visibility[®] website allows users to generate files for a lot of different purposes – not just for undocumented piece information. <u>Click here</u> to see what we've done to help insure only the necessary/proper data files are being selected for generating the report!

Now ALL DAT-MAIL users can take advantage of our PMOD module to mail sacks using ePostage!

Take advantage of drop ship discounts and/or better control in-home delivery dates! Just set up an ePostage account with International Bridge from within DAT-MAIL and you're pretty much ready to go – no postal approvals needed! <u>Click here</u> to get more information.

✓ To assist users, we've added a warning message to a change form in the CQT view.

<u>Click here</u> to get more information.

We've made changing Piece Weights a little easier.

We've added a new sort order for piece weights in the Advanced Navigator. <u>Click here</u> to see what we're talking about.

'Mark Pallets for eInduction' is now a Post-processing option in AWAM.

Only relying on a global import setting to automatically set e-induction information can be insufficient for some mailers, so we've made some modifications to our AWAM profile types to remedy this. <u>Click here</u> to get the details!

AUTOMATION SCHEDULERTM Automation Scheduler version 8.20.3.150

Download

✓ We've made a slight modification to the combined installer logic.

In the March release of the Automation Scheduler, a new installer was introduced that included PostalWeb Connector. <u>Click here</u> to discover the slight modification we made to how the combined installer works.

\checkmark Working smarter so you don't have to.

Now you can set your presort export folder to the same location as the DAT-PreCheck import folder without experiencing any conflicts. <u>CLICK HERE</u> to real all about it!

AWAMTM FILE MANAGER AWAM File Manager version 8.20.13.29

✓ Now you can differentiate workflows for Mail.dats being processed at different facilities.

We've added two additional fields to our Rules function so mailers can use them to help identify Mail.dat files being processed at different facilities. <u>CLICK HERE</u> to get more information!

ARE YOU UP TO DATE?

DAT-MAIL version 21.20.13.20

Multi-Carrier Trailer Manifesting now includes support for King Logistics users!

MCTM isn't just for use with LSC or ALG anymore. Now users can set up DAT-MAIL to include King Logistics as a carrier. This new carrier option allows users to send Mail.dat files to King Logistics via an SFTP site of their choosing.

Simply add King Logistics to DAT-MAIL's Carrier list (accessible from the 'File' > 'Carrier List' menus) by inserting a new carrier called King Logistics and entering the user-supplied SFTP credentials in the screen's 'Data Exchange' tab.

Once King Logistics has been added to the Carrier List, select 'File' > 'Program Settings' > 'Program Setup' to launch the *Setup* screen. Then, select the 'Logistics' tab. A new Logistics Data Exchange option for King Logistics is included on the screen. Use the corresponding browse button to navigate to and select 'King Logistics' from the Carrier List.

	Egit	

For more information about Multi-Carrier Trailer Manifesting in DAT-MAIL, refer to the "<u>Multi-Carrier Trailer</u> <u>Manifesting Setup & User Guide</u>".

Now you can update a pallet's gross weight in Multi-Carrier Trailer Manifesting!

In this April release of DAT-MAIL, we've added the ability to add/edit gross weight for single and mother pallets, and sibling pallets within Multi-Carrier Trailer Manifesting.

An **Update Gross Weight** button has been added to the Browse Pallet Database screen accessible by using the **Assign Pallets to Manifests** button in Multi-Carrier Trailer Manifesting menu.

DAT-MAIL Editor users can now view their pallet list!

In this release of DAT-MAIL, we've provided DAT-MAIL Editor users who are not registered to use Multi-Carrier Trailer Manifesting, the ability to view their pallet list. DAT-MAIL's pallet view can provide extremely valuable information about what is scheduled to be shipped for any date range, as well as other important information for users.

DAT-MAIL Editor users who are not registered to use Multi-Carrier Trailing Manifesting will now have a new menu option of 'View Pallets' under the main 'File' menu.

For this new menu option to display, pallet tracking must be enabled in the software. The 'Enable Pallet Tracking' option is located in the 'Pallet Tracking/Intelligent Mail' tab of the Setup screen, which is accessible from the 'File' > 'Program Settings' > 'Program Setup' menu options.

laintenance		Labeling	List Validation		Logistics		PMOD

General Enable	te Unique ID Pallet Track	is for Palle	fts				
General Enable	te Unique ID Pallet Track	hs for Palle	rts				

Once the 'Pallet Tracking/Intelligent Mail' option is selected, the 'View Pallet' menu option will become available as part of the 'File' menu (see first image above on this page), and a new icon (i.e. a pallet of mail) will display on DAT-MAIL's menu bar.

D	DAT-MAIL	Editor							_		×

😢 Pallet-related reports and utilities will also be available (i.e. **Reports & Utilities** button).

If at least one Filter option is <u>not</u> selected/set (refer to "Browse Pallet Database" screen image above), the REPORTS & UTILITIES button will be disabled.

Report: Allows users to create a Trailer Pallet Report based on pallets filtered and tagged in the
pallet list. When the 'Report' option is selected, users can specify a sort order to be applied to
the report (i.e. Job Number, Job ID, Estimated Ship Date, Postage Statement Mailing Date).
 When processing is complete, the report can be displayed on the screen or be immediately sent
to a printer.

Troubleshooting in wbSCAN for LSC/DIME users just got easier.

When using LSC/DIME, certain functions in wbSCAN generate calls that communicate with other programs via request/response files. Having access to and being able to view these files can be critical should troubleshooting be necessary.

In this release of DAT-MAIL/wbSCAN, we've made modifications so that these XML request/response files are stored in SQL. What does this mean exactly? wbSCAN now includes a new 'Request Log' tab that is located in each function's *Scan Log Details* screen (e.g. Add Pallets To Manifest). When these "calls" (i.e. 'IPS Action') are made, the generated request/response XML file is displayed in the list.

	Req Date	Req Time	IPS Function Name	IPS Action	Success Records	Failed Records	File Ext	
	p 1/13/2020	4:32 PM	WBNPS:SendOrders224	Auto	1	0	xml	
l	a 1/13/2020	4:33 PM	WBNPS:UpdateOrderSta	Cancel	1	0	xml	
1	p 1/13/2020	4:40 PM	WBNPS:UpdateOrderSta	Uncancel	1	0	xml	
1	8 1/13/2020	4:41 PM	WBNPS:SendOrders224	Auto	1	0	xml	
1	n 1/13/2020	4:43 PM	WBNPS:UpdateOrderSta	Cancel	1	0	xml

	+ First +	Previous	+ Next + Last					
/ Clo	se ivit					000 200011020		
					12 10.563.2	125		

The details of each individual file, including the file's location on the server or computer, can be viewed

by clicking the view button or icon ² located at the beginning of the file's line item in the log. The actual XML file can also be opened and viewed by clicking the **View File** button in the details screen.

	✓ Close				Continued

Since these XML response/request files are now stored in SQL, we've also incorporated a new database clean up setting in the LSC DIME settings area in DAT-MAIL. Simply navigate to 'File' > 'Program Settings' > 'Program Setup' to launch the *Setup* screen. Select the 'Logistics' tab and click the **LSC DIME Settings** button.

Routinely deleting these files on a timely basis is important for maintaining good database health and system performance!

wbSCAN's Dashboard now provides drill-down capabilities so you can see the pallet information for each job!

With this release of DAT-MAIL/wbSCAN, the capability now exists to click on a "Job" displayed in the Dashboard and view the list of pallets associated with that job.

WD (SCAN											
Scan	O Browse O L	ogout

	01.0000	124 7000	1.209	7	0			3/23/2020	11	0

We've also provided the ability to generate a CSV file of the pallet data that can be downloaded from wbSCAN. When the **Generate Export File** button is clicked, the CSV file will be created and download link will be provided on the screen. Users must click the link to download the file.

Generated files will be deleted from the screen when the Job View is closed or navigated away from, and/or if a user-session expires. The pallet data export file will have to be generated again to be able to create a downlaod for it.

We made running our Undocumented Piece Audit Report smarter.

DAT-MAIL's Undocumented Piece Audit Report only uses information pertaining to undocumented pieces. The Informed Visibility website; however, allows users to generate files for a lot of different purposes. This means users could inadvertently select unnecessary files during the process of running the Undocumented Piece Audit Report, affecting processing speed and overall system performance.

To help lessen the chances of this happening, we've implemented a file mask when selecting files for processing that will only show those files that fit the format necessary for generating the Undocumented Piece Audit Report.

This new mask is applied when the files are selected for processing.

nput Path:	C:W8MDVDataWIITR_Data		
Julput Patri	C:WBWDV/DataUndocPieceAudtRpfi		
SQL Work Path	1		
	UNC path - must be accessible to both MS SQL server	and DAT-MAIL server & vo	ristationa
hput Files:	Name	Size	

When the Input browse button is clicked, a Select files to process browse is displayed, with the default file type set to a value of "Mail Quality Data". And only those files that fit the "mask" will be displayed for selection (i.e. '*.MQD_SE_U_*.txt').

Select files to process.				×

This will help insure only those files relevant for generating the Undocumented Piece Audit Report are selected.

Now ALL DAT-MAIL users can take advantage of our PMOD module to mail sacks using ePostage!

Not a large need for shipping Priority Mail Open and Distribute[®]? Do you only use PMOD to ship sacks every now and again, but not enough to warrant a major investment into it? Well then, we've got a GREAT solution for you!

With this release of DAT-MAIL, ALL users can use our PMOD module for shipping sacks to take advantage of drop ship discounts and/or better control in-home delivery dates. All that's needed is for you to set up an ePostage account with our partner International Bridge and you're pretty much ready to go!

Simply go to DAT-MAIL's Setup screen (i.e. 'File' > 'Program Settings' > 'Program Setup') and select the 'PMOD' tab. Use the browse button for the 'Default IB Account' setting.

ontainer Tare W	feights	Export	Archive	Advanced	Settings	Pallet Tr	acking/Intellig	ent Mail

Once setup is complete, you're ready to take advantage of the PMOD module for mailing sacks!

Any questions? Give Window Book's Client Services Team a call at 800-524-0380 or create a Support Ticket right from within DAT-MAIL. We'll be glad to help!

To assist users, we've added a warning message to a change form in the CQT view.

Making changes to the CQT Service Level Indicator field could impact the full service status of the segment that CQT is related to. If needed, DAT-MAIL will automatically keep the SEG 'Full Service Participation Indicator' up-to-date and in sync with updated CQT records. Users may not realize this so, based on a customer's request, we've added a warning message to the CQT Update screen:

We've made changing Piece Weights a little easier.

To assist users making changes to Piece Weights in a file, we've added a new sort order in the *Change Weights* screen accessible from the Advanced Navigator. The file data displayed in the new 'Mail Piece Weight' tab is sorted by Weight (i.e. lowest to highest). This request came from a Client, and we listened!

'Mark Pallets for eInduction' is now a Post-processing option in AWAM.

Only relying on a global import setting to automatically set e-induction information can be insufficient for some mailers, so we've made some modifications to our AWAM profile types to remedy this.

'Mark pallets for elnduction' used to be included in the AWAM Import profile options; however, we've moved it so that it is now part of the Post-processing options. This means 'Mark pallets for elnduction' is now an available option in AWAM Import, Merge, and Post Process profiles.

AUTOMATION SCHEDULER

Automation Scheduler version 8.20.3.150

We've made a slight modification to the combined installer logic.

In the <u>March release of the Automation Scheduler</u>, a new installer was introduced that included PostalWeb Connector software. The ability to install PostalWeb Connector was available to all Automation Scheduler users.

In this April release, a slight modification has been made to the installer. The option to install or update PostalWeb Connector is only made available when the Automation Scheduler installer detects an existing installation of the PostalWeb Connector. If an existing installation of PostalWeb Connector is not detected, the option to also install PostalWeb Connector is hidden and not available to the user.

Working smarter so you don't have to.

Auto Validation users can set their presort export folder to the same location as the DAT-PreCheck import folder without experiencing any conflicts.

Prior to this April release of DAT-PreCheck (DPC), having the same folder set for both would sometimes cause problems because the entire Mail.dat may not have gotten placed into the input folder before DPC would grab it. When this occurred, the job would fail in DPC.

So, Window Book has implemented a time delay feature to assist in avoiding this conflict. Now, DPC will wait one minute after a new file is identified before it will attempt to pick it up. If after the one minute the file still cannot be grabbed by DPC (the file is still locked or in use by presort), DPC will try up to 10 times to grab it (for up to two hour and 45 minutes).

AWAM FILE MANAGER

AWAM FM version 8.20.13.29

Now you can differentiate workflows for Mail.dats being processed at different facilities.

Mail.dat files that are not being presorted to specific facilities makes it hard for mailers with multiple facilities to differentiate workflows for them. To assist with this, Window Book has added two additional fields to our Rules function so mailers can use these fields to help identify the facility a Mail.dat file is being processed in.

SEG-1118 Verification Facility Name and CSM-1167 Locale Key are now included in the Rules function of the AWAM File Manager. These fields can be selected by a user when defining a Rule to determine what should be done with Mail.dat files specific to certain facilities.

ARE YOU UP TO DATE?

Not all Window Book products that were published in this release included enhancements. Some products were released as a result of bug fixes or support updates for other Window Book software. All Window Book software should be kept up to date at all times to avoid any possible operating issues. The Window Book product(s) that were released and fit these criteria are listed in this section. Links to each product's Software Update page are provided so you can easily download and install the latest version.

Please Note: Bug fixes are documented in the Release Notes that accompany every product release and are viewable on each product's Software Download page.

DAT-MAIL Prep™

DAT-MAIL Prep version 8.20.14.176

Includes support for Scheduler 8.20.3.150 No bug fixes

POSTALWEB CONNECTOR™

PWC version 8.20.20.223

Includes support for Scheduler 8.20.3.150 No bug fixes

MAILDROPTM

MailDrop version 8.20.13.56

Includes support for PostalWeb Connector 8.20.20.223 No bug fixes

POSTALWEB DESKTOP DASHBOARD™

PWDD version 10.20.20.213

No bug fixes
